NO BOX DEV

STUDIO CASE STUDIES · 2026

Software that ships — across every surface.

No-Box-Dev is an AI-native software studio building developer tools, consumer apps, and games — native macOS, web & cloud, mobile, and 3D. This is a tour of what we've built.

NATIVE DEV LOOP

noboxdev.com · github.com/No-Box-Dev

A studio, not a single product.

No-Box-Dev designs, builds, ships, and maintains a portfolio of products end-to-end — from Rust game engines to App Store macOS apps to Cloudflare-scale web platforms. Development is AI-native: agents are first-class collaborators across the whole workspace.

Everything here is real, running code — not mockups. Each entry lists the stack, current status, and a live link or repository as proof.

Native macOS

SwiftUI menu-bar & desktop apps — NoxKey, NoxViewer, NoxFeed, NoxPilot, noboxedu.

Web & cloud

Next.js + Cloudflare (Workers / Pages / D1 / R2) — unticket, NoxSpot, Boundless Learning, 112Schade.

Mobile

SwiftUI iOS & iPadOS — Robin, Baseline, noboxedu.

Games & 3D

Bevy / Rust — Character Gallery, AidenArena, wow-arena-db.

Developer tools — the nox* family

A growing suite of native, fast, opinionated tools for developers. Shared naming, shared patterns, one workspace.

NoxKey

Keychain-grade secrets, unlocked with Touch ID.

A macOS menu-bar secret manager built on the system Keychain, with an MCP server so AI agents can read secrets on demand. Mac App Store distribution.

SwiftUI · macOS · Keychain · MCP

App Store · noxkey.ai

NoxViewer

Triage GitHub issues without leaving the menubar.

A macOS menu-bar app for GitHub issue triage, extracted and hardened as its own product. Signed + notarized, distributed via GitHub Releases.

SwiftUI · macOS · GitHub App

Shipping · github.com/No-Box-Dev

NoxFeed

Your team's PR feed, narrated, in the menubar.

A read-only macOS menubar client for a team's GitHub pull-request activity — live feed, per-person "current" view, PR timelines, native notifications. Sandbox-friendly, MAS-bound.

SwiftUI · macOS · Sandboxed

MAS pending · app.unticket.ai

NoxPilot

One native app for mail, calendar, and tasks.

A unified macOS PIM (mail + calendar + tasks) targeting Mac App Store. Swift engines (noxmail / noxcalendar / noxtask) talking to an external MCP server over a Unix-domain socket inside the app container.

SwiftUI · macOS · MCP · MailCore2

In development · noboxdev.com

NoxSpot

Bug reports with a screenshot, not a novel.

A bug-reporting widget SaaS: capture & annotate screenshots from any site, then file them as GitHub issues. Embeddable JS widget + Cloudflare API + D1 + R2.

Cloudflare Workers · D1 · R2 · Hono

Live · app.noxspot.dev

Shotfix

Screenshot it. Get the fix.

Visual AI input for developers — snap a screenshot of a problem, get an AI-driven fix. A focused, fast feedback loop for debugging UI and code.

AI · Developer tooling

Built · github.com/No-Box-Dev

NoxLink

The activity feed for your AI agents.

A local-first feed that streams what autonomous agents ship, break, and fix — auto-detecting file edits, commits, builds, branch switches, PRs, and deploys across the whole workspace.

Local-first · Watchers · HTTP API

Internal · github.com/No-Box-Dev

Nox Agents

Autonomous agents that ship across projects.

A headless orchestration hub that runs `claude -p` agents across projects — scheduling, multi-project coordination, and token-exhaustion recovery.

Agents · Orchestration

Internal · github.com/No-Box-Dev

Platforms & web

Full web products on Cloudflare's edge — AI-assisted project management, education, and line-of-business software.

unticket

AI project management that reads your repos.

An AI-powered project-management dashboard (formerly GitPulse). A GitHub App ingests org activity into a Cloudflare D1 store, and an AI narrator turns every PR into a first-person team update. The shared backend NoxFeed reads from.

Next.js · Cloudflare Pages · Functions · D1

Live app.unticket.ai

Boundless Learning

Adaptive learning, web-scale.

An education platform with a Next.js frontend on Cloudflare Workers + D1, deployed via OpenNext. Pairs with a native iPad client (noboxedu) through pair-code auth.

Next.js · Cloudflare Workers · D1

Deployed noboxdev.com

noboxedu

The classroom, on iPad.

A native SwiftUI iPad app (iPadOS 17+) that connects to the Boundless Learning backend via pair-code authentication. xcodegen-managed, MAS-track.

SwiftUI · iPadOS · xcodegen

Built github.com/No-Box-Dev

112Schade

Insurance claims, end to end.

A line-of-business insurance-claim-management platform: Next.js 16 + Cloudflare Workers + D1 + a FastAPI service + Better-Auth + Postmark for notifications.

Next.js 16 · Cloudflare · FastAPI · Better-Auth

In development github.com/No-Box-Dev

Mobile, games & 3D

Native iOS apps for people, and a Bevy/Rust stack for real-time games and a shared 3D asset library.

Robin

Reading, for kids.

A native SwiftUI iOS app that makes reading engaging for children.

SwiftUI · iOS

Built github.com/No-Box-Dev

Baseline

Health, tracked simply.

A native SwiftUI iOS health-tracking app focused on a clean, honest baseline of your data.

SwiftUI · iOS

Built github.com/No-Box-Dev

Character Gallery

A CC0 3D model library — and the hub for it.

A Bevy/Rust 3D model gallery and editor that is the single source of truth for a CC0 model library. Other Bevy projects symlink `models/` in and read the generated `catalog.ron`, so asset changes propagate automatically.

Bevy · Rust · 3D · CC0

Active github.com/No-Box-Dev

AidenArena

A Bevy arena combat game.

A Bevy/Rust game and the first consumer of the Character Gallery asset library — pulling shared CC0 models in via the symlinked asset path.

Bevy · Rust · Game

In development github.com/No-Box-Dev

wow-arena-db

Game data, queryable.

A queryable SQLite database of class data — base stats, abilities, full talent trees, PvP gear, and a meta Arena build per class — backing AidenArena's combat modeling. Read-only FastAPI + Vite/React/TS viewer.

SQLite · FastAPI · React

Built github.com/No-Box-Dev

NO BOX DEV

Let's build something.

No-Box-Dev ships across native, web, mobile, and games — AI-native from the first commit. If you'd like a deeper look at any of these, or a conversation about building yours, reach out.
